

BUNNIEX HACKATHON

Unfog

Snap confusing paperwork →
get plain words, real deadlines, and a plan.

THE PROBLEM

Paperwork is written to confuse.

Medical bills

CPT codes, "adjustments", insurance math nobody can verify

Tickets & fines

escalating penalties buried in legalese

Lease notices

auto-renewal traps, quiet fee changes

The burden is unequal

hardest on students, immigrants, anyone reading in a second language

The cost isn't confusion.

It's missed deadlines, overpaid fees,
appeals never filed — money lost to
fine print.

THE SOLUTION

Photo in → clarity and a plan out

The screenshot displays the Unfog application interface. At the top, the Unfog logo is on the left, and 'papers - clarity - action' is in the middle. On the right, there are buttons for 'Explain in' and a language dropdown set to 'English'. Below the header, a 'New document' section shows a thumbnail of a medical bill. To the right of the thumbnail, the title 'Medical bill from Riverside General Hospital' is displayed, followed by 'From: Riverside General Hospital'. A yellow box contains the text: 'In one sentence: This is a hospital bill for a visit and tests, and the person has to pay \$685.13, or the hospital might send it to a debt collector.' Below this, a section titled 'Is this real?' with a shield icon shows a green checkmark and the text 'Looks legitimate', followed by three bullet points: 'Official letterhead and verifiable reference number', 'Specific services and charges listed', and 'Clear contact information for billing questions'. Another section titled 'In plain words' with a speech bubble icon provides a summary: 'This is a medical bill from Riverside General Hospital for services received on August 29, 2026, including an ER visit, lab tests, and a chest X-ray. The total charges were \$1,847.23, but after insurance adjustments and payments, the patient owes \$685.13. The bill is due within 30 days of the statement date, and if unpaid, it may be sent to a collection agency.' At the bottom, there are two columns. The left column, 'Key facts', lists: 'PATIENT J. DOE', 'ACCOUNT RG-447821', and 'SERVICE DATE 08/29/2026'. The right column, 'Deadlines', shows a date '2026-10-05' with '14d left' and a red warning icon, followed by the text 'Pay or contact billing' and 'If missed: Unpaid balances may be referred to a collection agency'.

Every fact highlights where it sits on the document · legitimacy check · countdowns

WHAT IT DOES

Not a summarizer — a decoder

Plain-language summary + ELI5

what it actually says, in words anyone understands

Deadlines

countdowns + one-tap calendar (.ics) export

Action checklist

every step has a "how do I do this" button

Call rehearsal

practice the scary call — by voice — vs an AI rep

Grounded facts

VL bounding boxes show where each fact lives on the page

Scam check

flags gift-card demands, arrest threats, fake URLs

Drafts that know your facts

letters pre-filled with real account numbers & amounts

Q&A + **12 languages**

answers quote your document, not generic advice

"Is this even real?"

The screenshot shows the Unfog interface with a document titled "Unpaid parking violation notice" from an "Unknown sender". The interface includes a top bar with the Unfog logo, a language selector set to "English", and a "Watch out" warning at the bottom. The analysis is divided into several sections:

- Is this real?**: A shield icon followed by the text "Is this real?". Below it, a warning icon and the text "Suspicious — verify before paying". A list of suspicious signals is provided:
 - Demands payment via gift cards or Bitcoin
 - Threatens immediate arrest
 - Uses a suspicious website URL
 - No official letterhead or verifiable reference number
- In plain words**: A document icon followed by the text "In plain words". The summary states: "This document claims there is an unpaid parking violation and demands \$250 be paid immediately via Bitcoin or gift cards to avoid arrest. It includes a suspicious link and phone call request, which are common tactics in scams."
- Key facts**: A list of details from the document:
 - AMOUNT DUE: **\$250.00**
 - PAYMENT METHOD: **Bitcoin or gift cards**
 - THREAT: **Arrest within 24 hours**
 - WEBSITE: **<http://pay-ticket-now.xyz>**
- Deadlines**: A calendar icon followed by a table of deadlines:

2023-10-15	1072d overdue
Pay or avoid arrest	
If missed: Threat of immediate arrest	

Fake ticket demanding Bitcoin → correctly flagged suspicious, with the signals named

HOW IT'S BUILT

Featherless AI, end to end

Resilience

fallback chain reroutes floods & capacity
failures mid-flight

Speed feel

SSE streaming + elapsed timers tame 25s cold
starts

Privacy

nothing stored server-side — history lives in
localStorage

Open models need babysitting

✗ Pure "!"-token floods from upstream

→ detect mid-stream, reroute to next model

✗ Gated Llama weights, VL capacity exhausted

→ fallback chain: Qwen2.5-72B → Qwen3-32B → Mistral

✗ Models wrap JSON in chatter

→ defensive extraction + retry loop

✗ Blocking HTTP froze the event loop

→ inference moved to threadpool

✗ 25s+ cold starts

→ streaming, timers, honest placeholders

UNFOG

Nobody should lose money to fine print.
